EXPERIENCE

Software Engineer

Lloyds Banking Group (via AND DIGITAL consultancy)

09/2022 - 01/2025 | Halifax, United Kingdom (Hybrid)

- Developed mortgage application platform using React, Redux, and TypeScript, delivering end-to-end features from implementation through unit testing, integration testing, and stakeholder demonstration in Agile environment
- Built dynamic form architecture with Formik and Redux, implementing URL-based state management (e.g., /income/1, /income/2) to handle multi-instance data collection for applicants with multiple income sources
- Resolved critical data synchronization issues between loan overview and detail pages by implementing proper Redux cache invalidation, ensuring 100% data consistency across mortgage application workflows
- Enhanced API error handling by replacing generic 500 errors with specific 400 validation responses and detailed error messaging, reducing debugging time from hours to minutes through targeted problem identification
- Created comprehensive component library including forms, buttons, dropdowns, and data display components by translating Figma designs into reusable React components, enabling 40% faster development and consistent UI patterns across 15+ mortgage application features
- Accelerated team development velocity by configuring proxy solutions to bypass corporate network restrictions, enabling use of essential VS Code extensions and development tools for senior developers
- Mentored colleagues on internal banking systems through hands-on demonstrations of API testing tools, Kubernetes management, and development environment setup, improving team productivity
- Maintained 90% code coverage through Jest and React Testing Library testing, participating in hybrid work model with sprint ceremonies conducted during 2 office days per week

Associate Product Developer

AND DIGITAL

03/2022 - 01/2025 | Halifax, United Kingdom (Remote)

- Built centralized Health Check dashboard enabling executives to track employee performance across 50+ active client projects, consolidating manual reporting from multiple sources into single source of truth

- Developed real-time data visualization and performance metrics tracking system, transforming manual update processes and improving project visibility for executive decision-making
- Created interactive charts and performance displays that streamlined executive reporting workflows, reducing manual data compilation and analysis time by 35% across leadership team
- Collaborated with 20+ stakeholders including project managers, account directors, and executives to gather requirements and document dashboard functionality, resulting in 50% higher feature adoption rates
- Led team presentations and stakeholder demonstrations across 40+ sessions, maintaining 95% positive feedback while working entirely remotely with distributed team of 8+ developers
- Mentored 3 junior developers in React development and coding best practices, providing technical guidance that enabled all mentees to successfully pass probation periods

Freelance Full Stack Developer

01/2025 - Present | Eskişehir, Türkiye

- Delivering custom web applications and technical solutions for international clients across multiple freelancing platforms
- Building portfolio website (Mohawamdeh.tech) with React and TypeScript to showcase professional projects and technical capabilities
- Expanding backend expertise through client projects involving microservices architecture and containerization technologies

Career Transition & Skill Enhancement

11/2020 - 03/2022 | United Kingdom

Successfully transitioned from Jordan to UK tech market by achieving English fluency, building portfolio of 5+ React/Node.js projects, completing 100+ coding challenges (60% improvement in technical interview performance), and earning 4 professional certifications - directly securing first UK software development position

Junior Software Developer

Luminus Technical University College

05/2020 - 11/2020 | Amman, Jordan

- Integrated Zoom API with university's learning management system, enabling seamless virtual classroom access for 2,000+ students during COVID-19 transition to remote learning
- Developed proactive API monitoring system that identified potential failures before they impacted users, reducing system downtime by 40% and ensuring consistent online class delivery
- Served as teaching assistant for 15 web development students, providing technical mentorship that resulted in 90% exam pass rate and improved coding competency
- Created comprehensive technical documentation for Zoom integration, reducing IT support requests by 60% and accelerating new staff onboarding by 50%
- Optimized university website responsive design for mobile devices, improving mobile user experience by 70% and increasing student engagement with online resources

EDUCATION

Luminus Technical University College

Advanced Software Development Certificate

Certified Full Stack Developer (900 hours intensive program)

Tafila Technical University

Bachelor of Engineering - Civil Engineering
